

ROBUSTUS Sliding Track Lock Cylinder (4010 - 4019) (Model: GSTR014)

- This roller profile lock consists of two components: the high security cylinder lock that is integrated into the roller profile of the front sash, and the adapter with which the locking bolt engages and that is screwed into the roller profile of the back sash.
- It uses an L-cam to bolt both roller profiles firmly together, so preventing the sashes from being forced apart. The sturdy, solid construction of the locking bolt prevents shearing.
- The measurements and surface design of the lock match the Robustus roller profile and can, of course, be used on both the left and right-hand side in order to reduce stock levels.
