

Advantage of the systems:

- Equipped with adhesive for high initial- and final bond strength.
- The self-adhesive connection is for permanent mounting and the mirror bracket can also be used in rooms where it, from time to time, turns out to higher humidity of air than usual, e.g. in bath-rooms. (The application in humid places with improved humidity of air caused by splash- and condensation water is not recommended.)
- The mounting is particularly easy, time and expenses saving.
- After its mounting, mirror can be removed and re-affixed without the use of tools.
- The velcro fastening system ensures that mirror does not slide during mounting and even slight lateral or vertical corrections of mirror position are always possible.

Sufficient for mirrors up to 0,8 m² size and 6mm thick (each 12kg mirror weight)
